

NETWORK

7. brain park island
Landscape as a forest with open spaces in which typical enclaves are settled. Both elevated network and narrow road system at grade move through the forest.

8. shopping-residential island
Two naturally shaped hills with four huge buildings with craters and canyons deliver a glazed outside skin and open public atriums inside. The large hill is cut two times by two satellites with boulevard like openings. The atriums are the scale of venues.

9. hotel island
A mega city block with 14 different gardens. All hotel rooms and apartments in the 'wings' of the project have two different gardens on both sides. A building at the scale of The Louvre is embedded. The block is elevated to open up the gardens visually to the public on all sides.

VIEW TOWARDS TRUDEAU AIRPORT

The network
The network links the local boroughs and communities with the heavy infrastructures and the seven islands. It is made of a modular elevated linear deck at +6 m, serviced with ramps, stairs, escalators and elevators. It has integrated lighting and facilities like service stations for bicycle and electric scooter rental. Landscape and vehicles can pass below at grade.

VIEW EAST TOWARDS DOWNTOWN

10. warehousing island
This stretched extension of newly built warehouses is situated in a landscaped park at the scale of New York City Central Park. All warehouses are on top of parking decks and oriented to the Lachine Canal.

11. commercial island
A laissez faire lay-out defines the market freedom of the present commercial enterprises.

12. park island
A new park, as an extension of the Saint-Jacques green space escarpment, will highlight this island.

13. cultural museum gallery island
To deepen the cultural industrial heritage of a series of warehouses, all buildings have their own plot with their own gardens. Each building has the right and space to extend within its own plot. New buildings are developed, enhancing and extending the current ones.
